

Foster Ribbon Tweeter

Dynamic Type Regular-Phase Speaker

The regular-phase speaker is one in which the individual diaphragm components are driven in the same phase over a full frequency range and hence considered as an ideal electro-acoustic transducer. The regular-phase speakers are broadly divided into two types; static and dynamic. The dynamic type is advantageous over the static type in that the latter needs drive power and has high impedance.

Nominal Impedance..... $8\Omega \pm 15\%$
 Nominal Power 20W
 Maximum Power 50W
 Rated Freq. Range 6,000~40,000Hz
 Sound Pressure Level $92 \pm 2\text{dB/W}$
 Net Weight 242g(8.54oz.)
 Cross Over 6,400Hz(12dB/oct.)

E100T10 A0001 (100mm, 4 inch)
