NEWS RELEASE

August 24, 2005

Allen Vista™

Allen Organ Company, Macungie PA, USA, announces the release of an exciting new product that significantly increases the versatility of organs. Allen Vista™ adds hundreds of exciting sounds to MIDI-capable organs and also functions as a multi-track recording device for organ and MIDI sounds. Vista also includes advanced MIDI routing capabilities for organs.

The high-quality sounds included in Vista provide the realism that has made Allen Organ Company the largest church organ builder in the world. Vista's multiple MIDI ports provide quick and easy control of several sound sources simultaneously. Each port is independently assignable to any organ piston. The combination of Vista and Allen's advanced MIDI organ control features offers the most sophisticated and versatile MIDI controller available.

Vista's CompactFlash memory provides convenient storage for hundreds of sequences and organ capture files, as well as Vista setting files. Easily transportable, Vista's memory card can also be connected to a PC for advanced file management or downloading of sequences/files from other sources.

Vista opens new performance horizons with: 128 General MIDI sounds; 94 Allen-sampled organ stops including principals, reeds, flutes, strings and percussions; 21 additional Allen-sampled orchestral instruments; 159 sound variations; 8 drum sets; and independent volume, turning note-range and octave selection for each voice -- assignable on a per-piston basis. Other Allen Vista features include: a dual-mode alpha dial for quick data entry; three MIDI ports, independently assignable to any organ piston; integrated multi-track sequences including independent tracks for organ and each MIDI port, completely compatible with standard MIDI files; removable CompactFlash memory storage including numerous Allen supplied sequences -- both organ and orchestral; and utilities for storing and retrieving organ capture settings, Vista settings and pre-recorded sequences.
